

The Joint Action on Health Information InfAct

Final meeting - 21/01/21

Name: Petronille Bogaert, Linda Abboud, Miriam Saso and Herman Van Oyen
Institution: Sciensano, Belgium
Contact: infact.coordination@sciensano.be

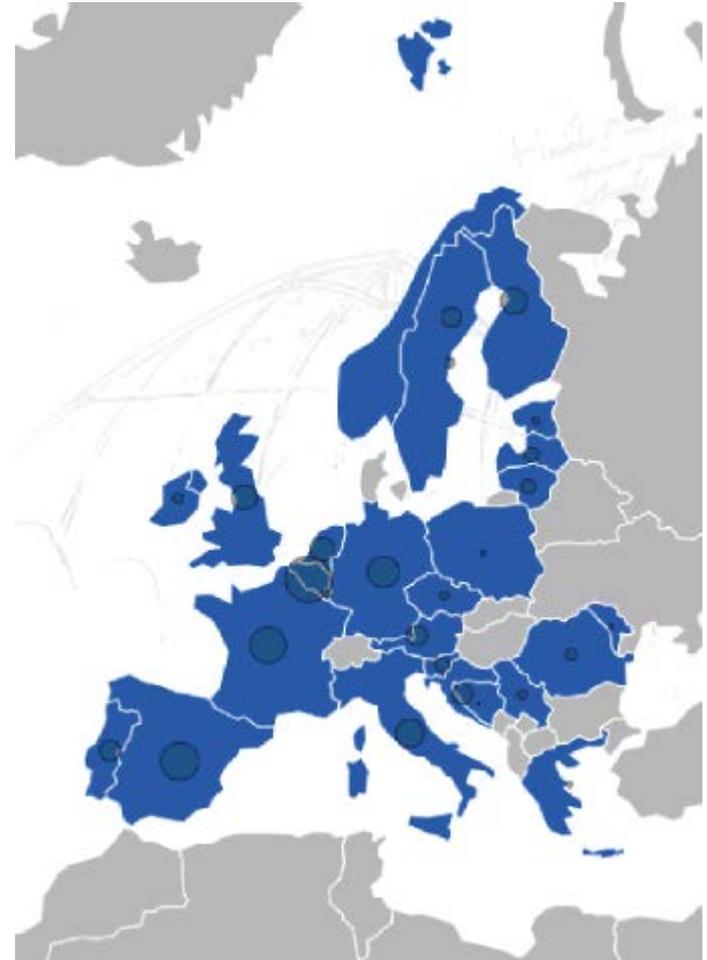

This project is funded by the
Health Programme of the
European Union

40 institutions in 28 countries:

Austria, Bosnia Herzegovina,
Belgium, Croatia, Cyprus, Czech
Republic, Estonia, Finland, France,
Germany, Greece, Ireland, Italy,
Latvia, Lithuania, Luxembourg,
Malta, Moldova, Netherlands,
Norway, Poland, Portugal, Romania,
Serbia, Slovenia, Spain, Sweden,
United Kingdom

→ 20 public health or research institutes,
13 ministries, 3 universities and 4 others

InfAct's goals are to strengthen national and EU health information systems by:

1. Establishing a sustainable research **infrastructure** which will support population health and health system performance assessment.

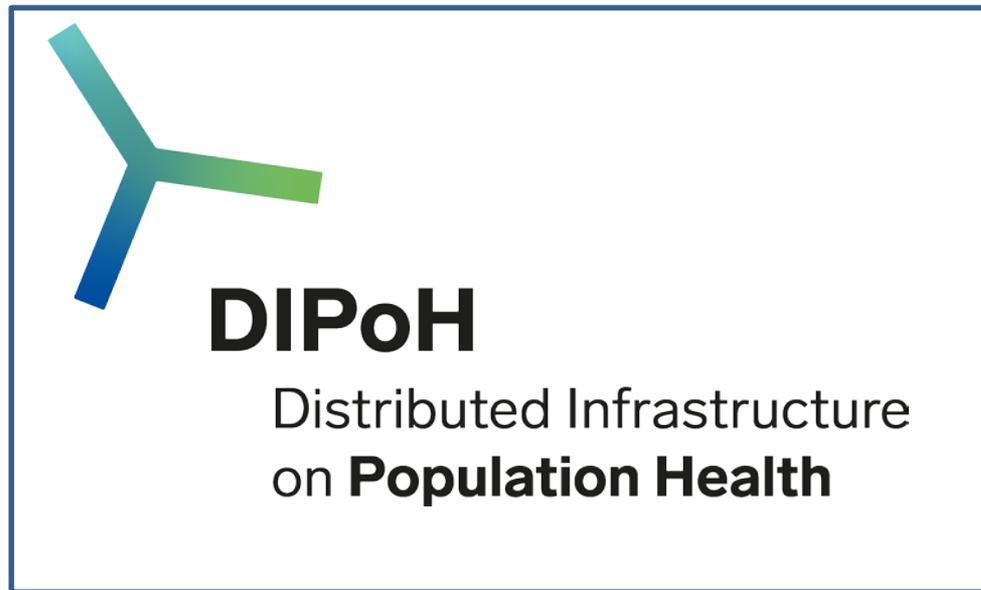

2. Strengthening European health information and knowledge bases and health information research **capacities** to reduce health information inequalities,

3. Supporting health information **interoperability** and **innovative** health information tools and data sources.

To conceptualize a sustainable Research Infrastructure and carry out a proof of concept:

Integration into national policies and sustainability

Status of health information systems in the EU

Strengthen health information capacity

Proof of concept for sustainable structure

Assessing and piloting interoperability for public health policy

Tools and methods for health information support

Innovation in health information for public health policy development

Integration into
national policies and
sustainability

Status of health information
systems
in the EU

- Organisation of **Assembly of Members** with representatives from Ministries of Health and Research.
 - Sustainability plan.
-
- Assessment of health information systems through peer-review.
 - Cataloguing of networks and projects.
 - Prioritization of health information

Strengthen health
information
capacity

Developing a capacity strengthening baseline programme at EU level to support critical areas of health information use and management

- Flagship training programme
- Roadmap for capacity building

Proof of concept
for sustainable
structure

Developing a proof of concept of a sustainable organisational structure - working towards ERIC by:

- Application for ESFRI roadmap
- Connection of MS health information networks
- Connection pan-European research networks
- Development business case and roadmap
- Creation of web-based platform

WP8, WP9, and WP10

Tools and methods
for health information
support

- Health monitoring data collection methods and indicators
- Guidelines on accessibility, availability, and reporting in health information

- Sharing inspiring examples from MS on emerging indicators and data sources to target priority public health actions and health care strategies
- Enlarging the set of morbidity indicators available across the EU

Innovation in health
information
for public health policy
development

Assessing and piloting
interoperability
for public health
policy

- Mapping and analysing (inter)national inspirational case studies on public health interoperability
- Developing empirical work through case studies and pilots

EUROPE
EXPERTISE NATIONAL
RESEARCH
KNOWLEDGE SHARING

UNIQUENESS

The road to DIPoH

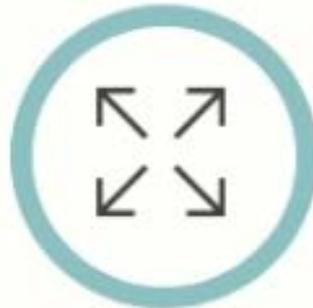

The Challenges

FRAGMENTATION

Disperse knowledge
Incomplete data
Difficult access

INEQUALITIES

Differences in quality
Diversity in research
capacity

PROJECT BASED

No long term planning
Waste of resources
Duplication

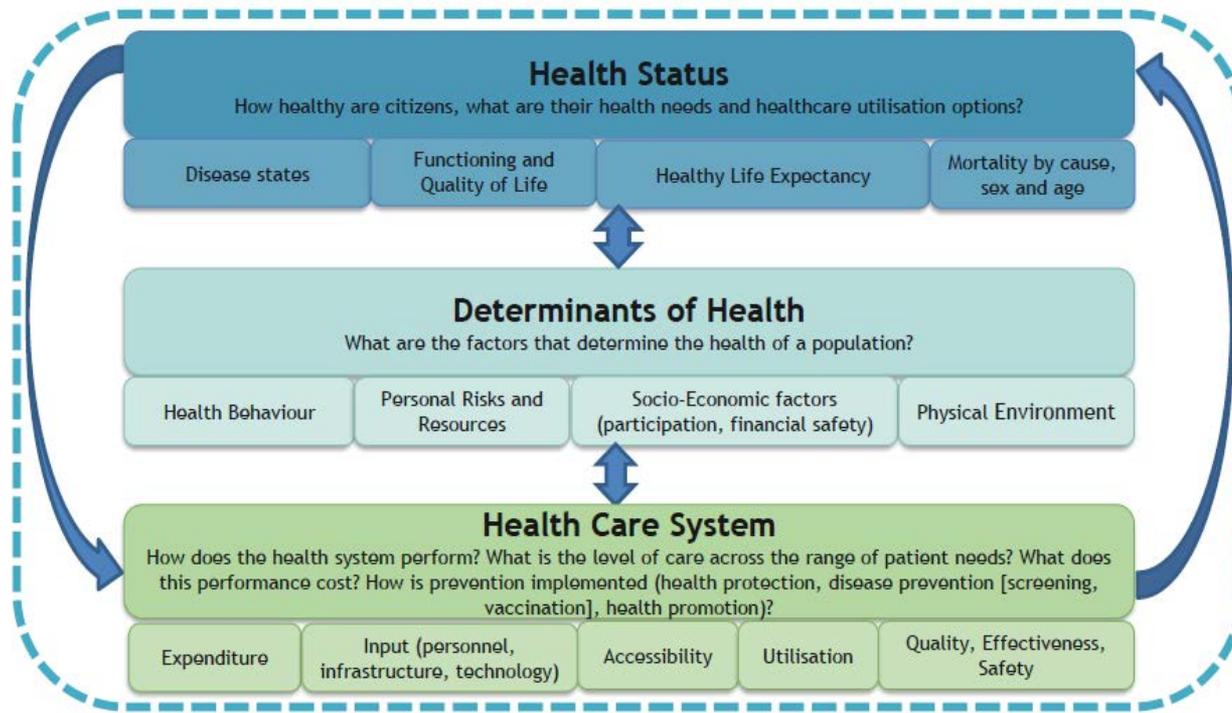

➔ Need for EU health information infrastructure

Why a Research Infrastructure?

- Allows responses to current needs and demands with high usability for Member States and EU institutions → focus efforts on priority aspects
- Innovation in science and technology is **vital to solving economic and societal challenges**
- **Build bridges** between research communities and with decision-makers
- Facilitate innovation and **knowledge-sharing**
- Can ensure continuity of existing health information activities
 - **Is the most feasible solution in the current setting**

Population Health

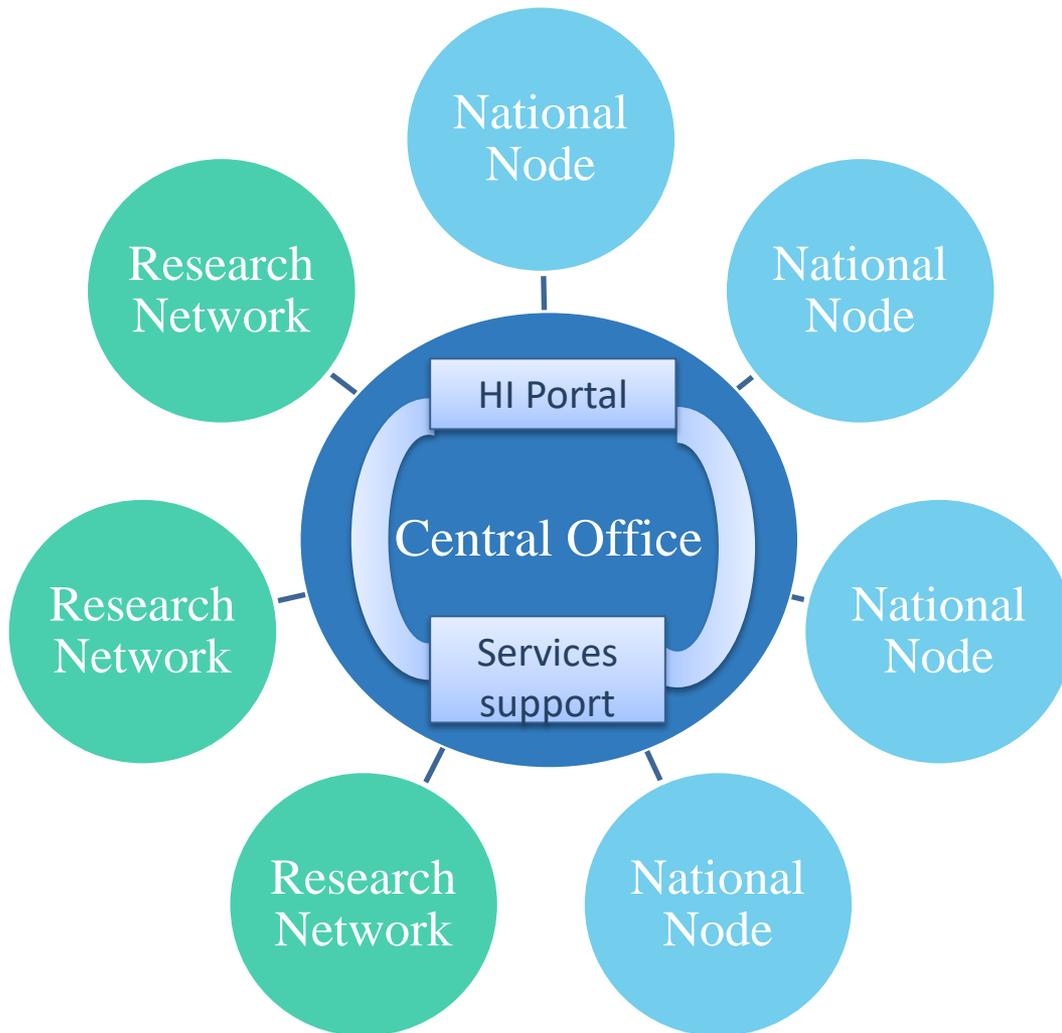

Uniqueness of DIPoH

- Covers the population as a whole (healthy and non healthy)
- Facilitate secondary use of routine data sources
- Include individual and aggregated level data
- Does not include experimental research
- Boost national population health research

- Filling a Gap in the RI landscape

The Structure

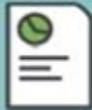

- **National Nodes (NN)** units within MSs representing national network,
- **Research Networks (RN)** and their research communities,
- A **Central office and governance structure**,
- A **Health Information (HI) portal** as gateway to data, services and tools on population health

The Services of DIPoH

- 1** One-stop shop for EU health information research

Find the data, expert, network, guidelines or tool you are looking for

-  Innovative research in health information

Be the first to know and use the latest developments and methodologies

2
- 3** Capacity building in health information

Get expert support and training on collection, analysis, reporting and transformation

-  Knowledge translation research for evidence based decision-making

Know your (health) policies are based on proper evidence

4

What we accomplished

- Developed concept of National Nodes and started set up
- Engaged Research Networks of Excellence (criteria, LoS)
- Engaged Public Health Institutes (MoU)
- Engaged Ministries of Health and Research (EoS)
- Set up one-stop shop for European Health Information (HIP)
- Submitted RI concept to ESFRI road map (DIPoH)
- Business plan and 5-year road map (finalizing)

The Services of DIPoH

- Metadata catalogue of existing health information projects and networks
 - Metadata catalogue of existing health information data sources
 - ELSI and FAIR guidelines
- ➔ Health Information portal . eu

The Services of DIPoH

- Leading-edge study designs and analytical methods (Machine learning techniques)
- Semantic and technological interoperability across datasets within and between countries
- ➔ Demonstrated feasibility of distributed infrastructure

The Services of DIPoH

3 Capacity building in health information
Get expert support and training on collection, analysis, reporting and transformation

- Training course provided:
 - European School on Health Information
 - Burden of Disease
 - ➔ Material available on Health Information portal
- Health information system assessment

The Services of DIPoH

- Building of National Nodes
- Define priority actions in health information
 - Priority setting study
 - Health information system assessment
 - Inspiring cases of innovation of data sources with AI to estimate health indicators
 - Piloting and inspiring cases interoperability
