

## General Assembly III

Breakout session for decision makers/investors  
Tools and guidelines & capacity building

Moderator Thomas Ziese  
Presenter Neville Calleja & Stefanie Seeling for InfAct

Virtual Meeting  
January 22, 2021

This project is funded  
by the Health  
Programme of the  
European Union

# Outline

- Prioritization in Health Information development and recommendations
- Application of best practices with topic specific reports
- Health Information System assessment and benefits for capacity building in a peer review format

This project is funded  
by the Health  
Programme of the  
European Union

- Prioritization in Health Information development and recommendations
- Application of best practices with topic specific reports
- Health Information System assessment and benefits for capacity building in a peer review format

# Aim & Research Question

Health information shall support public health policy action (agenda-keeping) and point to emerging public health issues (agenda-setting).

This brings up the following questions:

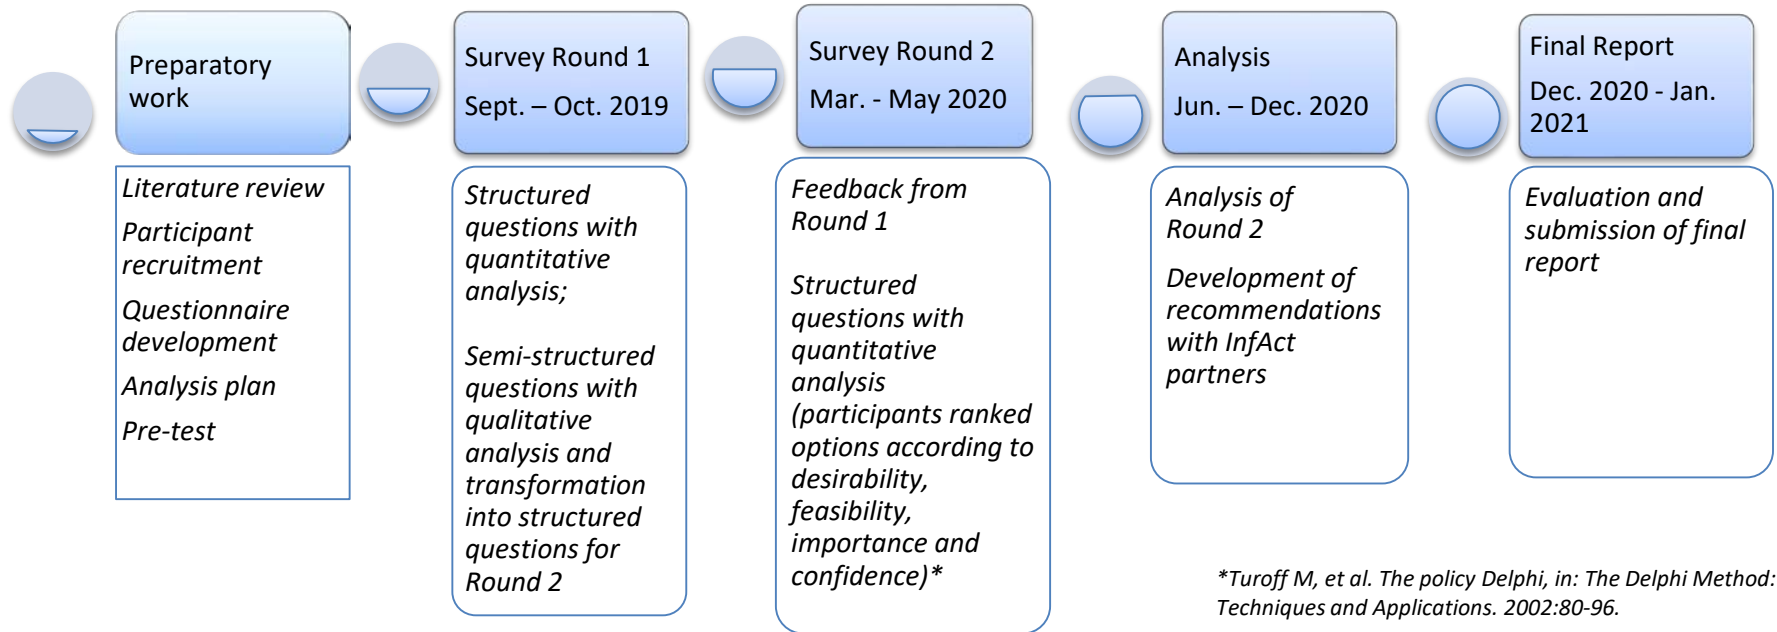

- How is health information for national health reporting prioritized?
- Are there „good-practice“-approaches to prioritizing health information?

This project is funded  
by the Health  
Programme of the  
European Union

# Method: Policy Delphi Survey

## Timeline

# Topics – Round 1 and 2

## Round 1

Structured prioritization processes?

Stakeholder involvement in prioritization of Health Information?

Criteria used in prioritization of Health Information?

Good practice approaches?

## Round 2

Ranking of:

- Approaches to national health information development

- Potential stakeholders
- Preferences for stakeholder coordination

- Options for actors, methods and guiding frameworks

- Approaches to good practices of Health Information prioritization
- Approaches for promoting good practices

# Selected Results - Structured Processes

## Round 1

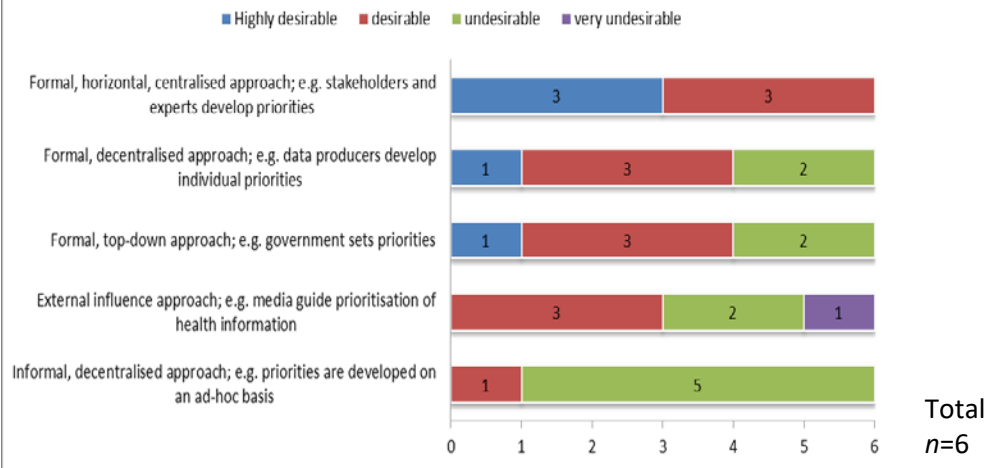

*In your country, are structured processes used to prioritize health information topics for national health reporting?*

Total  
n=26

## Round 2

### Ranking according to Desirability

# Selected Results - Stakeholder Involvement

## Round 1

*Are stakeholders involved in health information prioritization processes in your country?*

## Round 2

### Ranking according to Desirability and Feasibility

National Public Health Institutes were ranked as

- very desirable (n=6/6)
- definitely feasible (n=5/6)

stakeholders in Health information prioritization.

National Public Health Institutes were ranked as

- very desirable (n=5/6)
- definitely feasible (n=4/6)

coordinators of stakeholders.

# Selected Results - Criteria Development

## Round 1

*In your country, are criteria applied to prioritize health information topics for national health reporting?*

Total  
n=26

## Round 2

### Ranking according to Desirability and Feasibility

National health targets and national health strategies were ranked as

- very desirable (n=6/6)
- definitely feasible (n=4/6)

frameworks to guide prioritization.

Mixed meetings (researchers, policy makers, etc.) were ranked as

- very desirable (n=6/6)
- definitely feasible (n=3/6)

approach to criteria development.

# Selected Results - Good Practice-Approaches

## Round 2

### Ranking according to Desirability and Feasibility

Implementation of a National Health Information strategy was ranked as

- very desirable (n=4/5)
- definitely feasible (n=4/6)

approach to good practice in Health Information prioritization.

Other approaches include, e.g.

- implementation of national health targets
- implementation of a national legal act on Health Information
- set up a national catalogue on Health Information

This project is funded  
by the Health  
Programme of the  
European Union

# Conclusions & Recommendations

## Conclusions

- More than half of the respondents confirm existence of structured HI prioritization processes
- The respondents give preference to a formal, horizontal process for HI prioritization which includes different experts and stakeholders
- National health targets and strategies are desired guiding instruments for HI prioritization
- NPHIs are desired and feasible stakeholders in all HI prioritization processes

## Recommendations

- Continue to promote science-base, transparency and comprehension in HI prioritization
- Develop a guidance for 'Good Practice HI Prioritization' and use project results as starting point for joint efforts among EU MS

This project is funded  
by the Health  
Programme of the  
European Union

# Outline

- Prioritization in Health Information development and recommendations
- **Application of best practices with topic specific reports**
- Health Information System assessment and benefits for capacity building in a peer review format

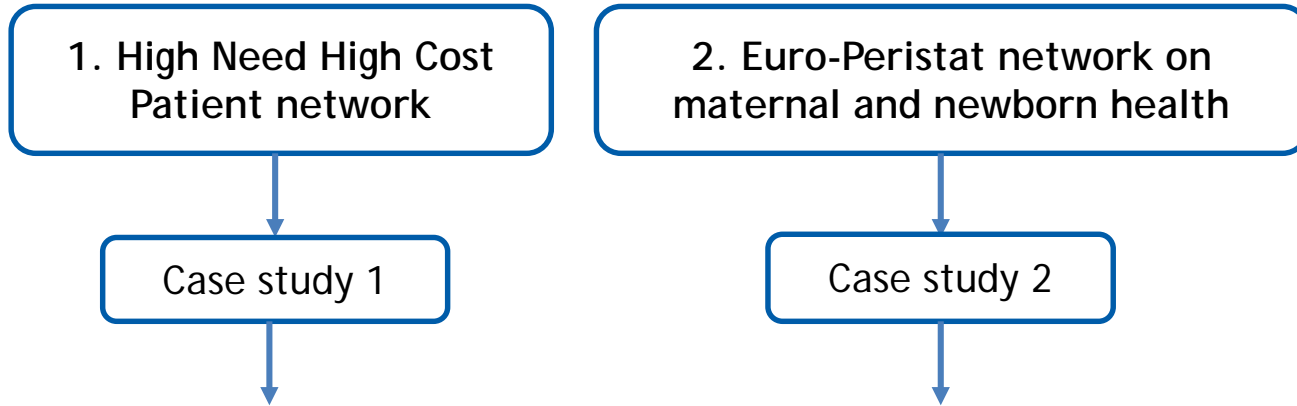

This project is funded  
by the Health  
Programme of the  
European Union

To highlight the best practices for innovative use of health information:

- in order to demonstrate the value of health information infrastructure as data exchange networks
- for public health policy process across the Member States

# EU-Data Networks

## Objectives:

- To identify a set of homogenous HNHC patient groups (vignettes)
- To examine variations in care delivery and outcomes across the entire patient pathway across a group of European and other high-income countries

## Objective:

- to describe the use of data linkage and advanced statistics in the reporting of perinatal indicators in Europe

# Policy implications of results (I)

- The majority of the countries have the **capacity to link data** on a routine basis.
  - Fewer countries routinely link health data to other databases, such as **socioeconomic data**, which make it possible to report on social inequalities in relation to various health outcomes
- The data linkage has the potential to **improve the comprehensiveness and the quality of health information** across European countries for:
  - patient care
  - public health monitoring
- The networks can provide **high-quality data** that can be used to inform future research and policy.

This project is funded  
by the Health  
Programme of the  
European Union

# Policy implications of results (II)

- Data linkage helps to evaluate the **patients care trajectories and outcomes and the impact of various factors** on health system performance.
- **Investing in data linkage** that enables to make informed decisions about care for patients.
- Linkage also improves possibilities for **measuring the impact of population risk factors**, including social disadvantage on health outcomes.

This project is funded  
by the Health  
Programme of the  
European Union

# Outline

- Prioritization in Health Information development and recommendations
- Application of best practices with topic specific reports
- Health Information System assessment and benefits for capacity building in a peer review format

This project is funded  
by the Health  
Programme of the  
European Union

# Why Health information system assessment?

- From assessment to change
  - Leaving no one behind
  - Decreasing inequalities
  - Leadership of health authorities

This project is funded  
by the Health  
Programme of the  
European Union

# Uncovering European HIS nuggets

- Comprehensive legal framework (NO)
- Citizen driven health information R&D (BE)
- Citizen access to own health information (EE)
- Partnering with arts for HI dissemination (LT)
- Target based interagency governance agreement (AT)

This project is funded  
by the Health  
Programme of the  
European Union

# HIS assessment = HIS awareness = HIS investment (1)

---

## National:

- Additional funding for HIS (SRB)
- Launch of eHealth records & eHealth strategy dev.(RO)
- Legal amendments taken forward (NO)
- Better understanding of HI possibilities by policy-makers; restart of several collaborative projects (LT)

This project is funded  
by the Health  
Programme of the  
European Union

# HIS assessment = HIS awareness = HIS investment (2)

---

## International:

- Increased demand to WHO (Euro) for formal HIS assessments from Western European countries
- First European training in Health Information (PT)
- Population Health Information Infrastructure for COVID-19 (PHIRI) (first use case)
- Longterm support: Distributed Infrastructure on Population Health (DIPoH)

This project is funded  
by the Health  
Programme of the  
European Union

*Thank you!*
